Applicant(s)

BUDD ET AL.

Examiner

Ilwoo Park

Art Unit

2182

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## Status

- 1) ☒ Responsive to communication(s) filed on 16 January 2007.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

## Disposition of Claims

- 4) ☒ Claim(s) 1-3,5,6 and 8-16 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-3,5,6 and 8-16 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

## Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

## Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
  - ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- \* See the attached detailed Office action for a list of the certified copies not received.

## DETAILED ACTION

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 1/16/2007 has been entered. 1 have been amended and claim 4 has been canceled in response to the last office action. Claims 1-3, 5, 6, and 8-16 are presented for examination.

2. Claims 1 and 11 have been amended and claim 4 has been canceled in response to the last office action. Claims 1-3, 5, 6, and 8-16 are presented for examination

### ***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-3, 5, 6, and 8-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ohran et al. [US 5,812,748] in view of Vinther et al. [WO 92/18931].

As for claim 1, Ohran et al teach in a computer system having a plurality of computers connected to a storage system, each computer having software capable of

Art Unit: 2182

sending and receiving network information, a method for providing continuous availability [col. 1, lines 20-30] of the network information without use of the network [ref. No. 2101 in fig. 5; col. 9, lines 62-65] comprising the steps of:

receiving [col. 2, lines 12-24] transmission packets into an internal thread [col. 4, lines 12-19; col. 11, lines 6-14] of the network and placing the transmission packets into a queue determined by the type of transmission packet;

upon determination [col. 7, lines 20-29] of the unavailability of the network and the determination [col. 2, lines 25-29] that the transmission packet is a write packet [col. 13, lines 3-8], copying [col. 7, lines 53-56] the transmission packets into a buffer; and the internal thread writes [col. 8, lines 14-20] the contents of the buffer to the storage system and enables transmission [col. 14, lines 22-27] of the stored write packets via an alternate path [ref. No. 2102 in fig. 5].

However, Ohran et al do not expressly disclose upon filling the buffer to a predetermined point waking the internal thread to process the filled buffer. Vinther et al teach a method for providing continuous availability of the network information without use of the network [e.g., ref. No. 19 in fig. 1] comprising the steps of copying transmission packets into a buffer [page 7, lines 5-14], upon filling the buffer to a predetermined point waking [page 17, lines 28-31] an internal thread to process the filled buffer, and the internal thread writes [page 7, lines 20-23] the contents of the buffer to the storage system. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to combine the teachings of Ohran et al and Vinther et al because they both teach mirroring network transmission packets

Art Unit: 2182

received, buffered, and finally stored into a storage system and the Vinther et al's teachings of upon filling the buffer to a predetermined point waking an internal thread to process the filled buffer would increase efficiency in buffering [Vinther et al: page 14, lines 12-18] rather than buffering all data [Ohran et al: col. 7, lines 53-56].

5. As for claim 2, Vinther et al teach prior to the internal thread receiving transmission packets, a client thread submitting the transmission packets into a write buffer [page 7, lines 5-8].

6. As for claim 3, Vinther et al teach calling, by the client thread, a transport data function, wherein the transmission packets are extracted from the buffer [page 7, lines 8-12].

7. As for claim 5, Ohran et al teach configuring the storage system to include a receive volume and a send volume, wherein the contents of the buffer are written to a send volume; copying the contents of the send volume to the receive volume [e.g., col. 3, lines 13-20].

8. As for claim 6, Ohran et al teach the receive volume and the send volume are respectively located on first and second logical volumes of the storage system [e.g., fig. 7].

9. As for claim 8, Ohran et al teach configuring the storage system to include a send volume [e.g., computer system 2110 in fig. 5], configuring a second storage system to include a receive volume [e.g., computer system 2120 in fig. 5], wherein the second storage system is geographically removed from the storage system; writing [col.

Art Unit: 2182

8, lines 14-20] the contents of the buffer to the send volume; and copying [col. 8, lines 14-20] the contents of the send volume to the receive volume.

10. As for claim 9, Ohran et al teach returning the internal thread to a sleep state after the contents of the buffer are written to the send volume [col. 4, lines 12-13].

11. As for claim 10, Vinther et al teach copying the contents of the send volume to the receive volume occurs upon a command from one of the plurality of computers [col. 13, lines 3-8].

12. Claims 14 and 15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ohran et al. [US 5,812,748] in view of well known in the art.

As for claims 14 and 15, Ohran et al do not explicitly disclose the internet. It is well known in the art that the Internet is an example of one of the ubiquitous networks that would be included as part of the prior art disclosure in order to increase adaptability to the ubiquitous network.

### ***Claim Rejections - 35 USC § 102***

13. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

14. Claims 11-13 and 16 are rejected under 35 U.S.C. 102(b) as being anticipated by Ohran et al. [US 5,812,748].

As for claim 11, Ohran et al teach in a computer system having a plurality of applications, in communication with a storage system, each application having a

Art Unit: 2182

process capable of sending and receiving information over a network to and from the plurality of applications, a method for providing continuous availability [col. 1, lines 20-30] of the network information comprising the steps of:

recognizing [col. 7, lines 20-29] that the network between the applications is unavailable;

in response to the unavailability of the network, writing [col. 8, lines 14-20] the network information from one of the applications to a first volume;

copying [e.g., col. 8, lines 14-20; col. 12, lines 50-54] the network information written to the first volume to a second volume system;

reading [e.g., col. 4, lines 15-19; col. 12, lines 58-61; col. 14, lines 50-54] the network information from the second volume; and

enables transmission [col. 14, lines 22-27] of the stored write packets via an alternate path [ref. No. 2102 in fig. 5]..

15. As for claim 12, Ohran et al teach reading the network information in less than a predetermined period of time after it is written to the first volume [col. 2, lines 49-60].

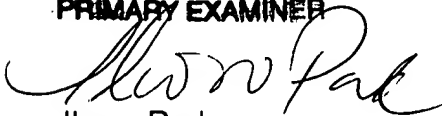

16. As for claim 13, Ohran et al teach the plurality of applications performs clustering functions [col. 16, lines 15-17].

17. As for claim 16, Ohran et al teach a second storage system geographically remote from the storage system, wherein the first volume is on the storage system and the second volume is on second storage system [figs. 7-9].

**Conclusion**

18. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ilwoo Park whose telephone number is (571) 272-4155. The examiner can normally be reached on Monday through Friday from 9:00 AM to 5:30 PM. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kim Huynh can be reached on (571) 272-4147. The fax phone number for the organization where this application or proceeding is assigned is (571) 273-8300. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
